Learning Path at a Glance - IBM watsonx Orchestrate

Learn how AI agents work, then build, deploy, and govern them in IBM watsonx Orchestrate

This two-step program moves from concepts to production. Agentic AI Solutions builds a vendor-neutral understanding of how agents reason, plan, and act, and ends with an agent blueprint for a real use case. Agentic AI with IBM watsonx Orchestrate then turns that blueprint into a working enterprise agent: tools, knowledge, collaborator agents, deployment with the ADK, evaluation, and governance.

Foundation

Basic

Agentic AI Solutions

2 days · 16 hours HAZ-DA-0062

How agents work and when to use them: the building blocks (LLMs, tools, MCP, memory, RAG), framework options, and designing an agent blueprint for your use case.

Sets the stage for HAZ-DA-0042.

All roles

Build on watsonx Orchestrate

Intermediate

Agentic AI with IBM watsonx Orchestrate

3 days · 24 hours HAZ-DA-0042

Turn your agent blueprint into a production agent in watsonx Orchestrate: build agents, tools, and knowledge, connect collaborator agents, then deploy, evaluate, and govern with the ADK.

✦ **With IBM Bob:** scaffold, test, and deploy ADK agents and tools from the IDE.

Developer

KEY BENEFITS

Agentic AI Foundations
Understand how agents reason, plan, use tools and memory, and when to use them.

Design Before You Build
Compare frameworks and turn a business use case into an agent blueprint.

Build & Govern on Orchestrate
Build, evaluate, deploy, and govern enterprise agents with watsonx Orchestrate.

Business Impact
Move from agent ideas to governed, production-ready agents faster.

Learning Path at a Glance - watsonx.ai

Start with the fundamentals, then move into model engineering and deployment

This training program builds practical, production-ready skills across the IBM watsonx ecosystem — from foundation model fundamentals and prompt engineering to fine-tuning, deployment, and agentic AI orchestration. Delivered virtually by expert-level SMEs along established learning paths, the curriculum lets participants apply new capabilities immediately, from core AI/ML concepts through building and governing enterprise-ready AI agents.

Foundation

Basic

IBM watsonx.ai Fundamentals

2 days · 16 hours HAZ-DA-0060

AI and ML fundamentals, the watsonx.ai platform, foundation models and prompt engineering, and preparing data for AI.

All roles

Build & Deploy

Intermediate

IBM watsonx.ai: Build, Deploy & Evaluate

5 days · 40 hours HAZ-DA-0061

Build prompt, RAG, and tuned-model solutions, deploy them through MLOps, and evaluate quality, safety, and drift with watsonx.governance.

✦ **With IBM Bob:** write and review build, deployment, and evaluation code and tests.

Developer

Administration

Intermediate

watsonx.ai Administration

2 days · 16 hours HAZ-DA-0048

Configure the platform and manage users, projects, access controls, environments, models, and day-to-day operations.

Administrator

KEY BENEFITS

Platform Mastery
Work hands-on with watsonx.ai Studio, foundation models, and prompt engineering.

Model Engineering
Fine-tune foundation models and deploy them through MLOps pipelines.

Monitoring & Governance
Apply drift detection, responsible AI, and governance best practices.

Business Impact
Enable reliable, production-ready AI and ML solutions.

Learning Path at a Glance - Data Intelligence

Start with the watsonx.data intelligence foundation, then specialize by role

The Data Intelligence learning path equips teams to catalog, govern, and trust enterprise data using IBM watsonx.data intelligence. Participants progress from core platform fundamentals through hands-on data cataloging, metadata management, data quality, and master data matching — building the skills to establish reliable, well-governed data across the enterprise.

Foundation

IBM watsonx.data intelligence
Basic
3 days · 24 hours HAZ-DA-0054
Platform overview and architecture, navigating the interface, core governance and cataloging concepts, and connecting enterprise data sources.
All roles

From Catalog to Pipeline with watsonx.data intelligence
Intermediate
3 days · 24 hours
Build the catalog first, then use its imported assets and connections to build, orchestrate, and monitor governed data pipelines.
Developer

Modernize

IBM Knowledge Catalog Modernization
Intermediate
Move from IBM Knowledge Catalog on Cloud Pak for Data to watsonx.data intelligence: plan the migration and carry over catalogs, governance artifacts, and metadata.
Administrator

Governance & Metadata

IBM Knowledge Catalog on Watsonx.data intelligence
Intermediate
3 days · 24 hours HAZ-DA-0034
Configure policies, business terms, and classifications; import and enrich metadata from Snowflake, Databricks, and more.
Data Steward

Unstructured Data using watsonx.data intelligence
Intermediate
2 days · 16 hours HAZ-DA-0053
Ingest, classify, and govern documents, images, and text, and extract metadata and insights from unstructured content.
Data Steward

Building Governed Business Intelligence with IBM watsonx BI
Intermediate
2 days · 16 hours HAZ-DA-0038
Build business intelligence on governed, trusted data with IBM watsonx BI, connecting cataloged assets and business terms to reports and insights.
Developer

Quality and Master Data

Data Quality using watsonx.data intelligence (SaaS)
Advanced
4 days · 32 hours HAZ-DA-0037
Build data quality rules, cleanse data hands-on with Data Refinery, and measure and monitor trustworthiness.
Data Steward

Match360
Advanced
3 days · 24 hours
Configure match models and entity resolution to build a single, trusted view of master data.
Data Steward

Manta
Advanced
3 days · 24 hours
Automatically scan and map data lineage with IBM Manta to trace data flows across systems, assess the impact of changes, and support governance.
Data Steward

Administration

watsonx.data Intelligence Administration
Intermediate
2 days · 16 hours HAZ-DA-0051
Set up the platform, manage users, access, and security, and support enterprise governance and compliance.
Administrator

KEY BENEFITS

Data Cataloging
Organize data assets and work with structured and unstructured data.

Governance & Metadata
Configure governance policies, business terms, and metadata with IBM Knowledge Catalog.

Data Quality & Matching
Build quality rules, cleanse with Data Refinery, and resolve entities with Match 360.

Business Impact
Enable trusted, well-governed data for confident enterprise decision-making.

Learning Path at a Glance - Data Integration

Start with the fundamentals, then build, orchestrate, and administer pipelines

The Data Integration learning path brings IBM watsonx.data integration together with DataStage, Orchestration Pipelines, and StreamSets to help teams design, administer, and operate enterprise data pipelines. Participants progress from core platform fundamentals through hands-on pipeline orchestration, administration, and production-grade reliability practices — building the skills to move, transform, and govern data across the enterprise with confidence.

Foundation

Basic

watsonx.data Integration Fundamentals

2 days · 16 hours

Platform overview and architecture, core integration concepts and terminology, and connecting to common data sources.

All roles

Build Pipelines

Intermediate

IBM DataStage on watsonx.data integration

4 days · 32 hours HAZ-DA-0035

Design ETL/ELT jobs on the parallel engine, transform and cleanse data, and deploy, schedule, and tune jobs.

Developer

Intermediate

IBM StreamSets: Building Resilient Data Pipelines within watsonx.data Integration

3 days · 24 hours HAZ-DA-0039

Design batch and streaming/CDC pipelines in Control Hub and handle schema drift.

Developer

Orchestrate

Intermediate

IBM Orchestration Pipelines with watsonx.data integration

1 day · 8 hours HAZ-DA-0036

Automate workflows across DataStage, Databricks, and Snowflake, with error handling and run monitoring.

Developer

Observability

Intermediate

Databand

2 days · 16 hours

Monitor pipeline health with IBM Databand: track runs and SLAs, detect data incidents, and alert on quality and freshness issues.

Developer

Data Streaming

Intermediate

IBM Confluent

Duration TBD

Build event-streaming pipelines on Confluent (Apache Kafka): topics, producers and consumers, connectors, and stream processing.

Developer

Administration

Intermediate

watsonx.data Integration Administration

2 days · 16 hours HAZ-DA-0050

Configure data sources and connections, monitor connectivity, and troubleshoot common administration issues.

Administrator

KEY BENEFITS

Pipeline Orchestration

Design and automate batch and streaming workflows across DataStage, Databricks, Snowflake, and StreamSets.

Platform Administration

Configure, monitor, and troubleshoot watsonx.data integration environments at scale.

Reliability & Monitoring

Apply drift handling, alerting, and monitoring that keep pipelines resilient.

Business Impact

Enable faster, more reliable, and scalable enterprise data integration.

nFolks DATA SOLUTIONS | © 2026 nFolks Data Solutions

Learning Path at a Glance – Data Lakehouse

Learn Data Lakehouse fundamentals with watsonx.data, then manage and secure the platform

Data Lakehouse training builds practical, hands-on skills for IBM watsonx.data, the open data lakehouse platform that unifies data warehouses, data lakes, and databases. Participants progress from core lakehouse fundamentals through platform administration, developing the skills to manage, secure, and optimize enterprise data lakehouse environments.

Foundation

Basic

watsonx.data Fundamentals

2 days · 16 hours

Lakehouse concepts such as open table formats and query engines, watsonx.data architecture, and connecting and querying data sources.

All roles

Administration

Intermediate

watsonx.data Administration

2 days · 16 hours HAZ-DA-0049

Manage users, resources, storage, and security, and monitor platform operations through hands-on scenarios.

Administrator

KEY BENEFITS

Lakehouse Fundamentals
Understand open table formats, query engines, and core watsonx.data architecture.

Platform Administration
Manage users, resources, storage, and security in watsonx.data environments.

Monitoring & Operations
Monitor platform operations and apply hands-on administration best practices.

Business Impact
Enable a unified, cost-efficient data lakehouse that scales with enterprise needs.
